

Itaya Full Moon Maple

Acer japonicum 'Itaya'

Height: 30 feet

Spread: 30 feet

Sunlight: ○ ●

Hardiness Zone: 6a

Description:

An exceptional small landscape accent tree; keep moist as leaves tend to scorch in the hot sun; brilliant red fall colour; attracts nesting birds; water more frequently if grown in full sun

Ornamental Features

Itaya Full Moon Maple is primarily valued in the landscape for its ornamental globe-shaped form. It features dainty corymbs of red flowers hanging below the branches in mid spring. It has attractive green deciduous foliage. The serrated lobed palmate leaves are highly ornamental and turn outstanding shades of yellow, orange and red in the fall.

Landscape Attributes

Itaya Full Moon Maple is an open multi-stemmed deciduous tree with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This tree will require occasional maintenance and upkeep, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Itaya Full Moon Maple is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Itaya Full Moon Maple will grow to be about 30 feet tall at maturity, with a spread of 30 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and should not be planted underneath power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This tree does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
